"Transport of intact porphyrin by HpuAB, the hemoglobin-haptoglobin utilization system of Neisseria meningitidis.";

J. Bacteriol. 180:6043-6047(1998).

-: CATALYTIC ACTIVITY: Glutamyl-tRNA(Glu) + NADFH = glutamate-1-semialdehyde + NADP(+) + tRNA(Glu).

-: PATHWAY: Porphyrin blosynthesis by the C5 pathway; first step.
-: SIMILARITY: Belongs to the glutamyl-tRNA reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Neisseria gonorrhoeae.

Lania L., Donti E., Pamutia G., Lanfrancone L., Pelicci P.-G.;

Tomba isolation, expression analysis, and chromosomal localization of Genomics 6:333-340(1990).

Tomba isolation, and principle of Genomics 6:333-340(1990).

L. FUNCTION: May function as a transcription factor.

C. I SUBCELLUIAR LOCATION: Nuclear (Probable).

C. I TISSUE SPECIFICITY: UBIQUITORSLY PRESENT IN MANY HUMAN CELL LINES CONTINENTALION.

C. I TISSUE SPECIFICITY: UBIQUITORSLY PRESENT IN MANY HUMAN CELL LINES CONTINENTALION.

C. I TINGER PROTEINS.

-!- STBCELLULAR LOCATION: Outer capsid.
-!- STBCELLULAR LOCATION: Outer capsid.
-!- PTM: VP8 is one of two trypsin cleavage products of VP4; the other
product is VP5.
-!- SIMILARITY: Belongs to the rotaviruses VP4 protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

"Phosphorylation of elfed at a conserved serine in Aplysia.";

"I Biol. Chem. 273:29469-29474 (1998).

"I Biol. Chem. 273:29469-29474 (1998).

"I Biol. Chem. 273:29469-29474 (1998).

"I Recognizes and binds the 7-methylguanosine-containing mRNA secondary structures.

"I Synthesis and facilitates ribosome binding by inducing the unwinding of the mRNAs secondary structures.

"I Synthesis and facilitates ribosome binding by inducing the unwinding of the mRNAs secondary structures.

"I Synthesis and the amulti-submit complex, the composition of the synthesis and internal and internal environmental conditions.

"I is composed of at least EIP4A, EIF4E and EIF4G. EIF4E is also known to interact with other partners (By similarity).

"I TM: Phosphorylation increases the ability of the protein to bind to mRNA caps and to form the EIF4F complex.

"I SIMILARITY: Belongs to the eukaryotic initiation factor 4E family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Fission yeast homologues of the B' subunit of protein phosphatase 2A: multiple roles in mitotic cell division and functional interaction

Proteins that associate with the core dimer include three families of regulatory subunits B (the R2/B/PR55/B55, R3/B''/PR72/PR130/PR59 and R5/B'/B56 families), the 48 kDa variable regulatory subunit, viral proteins, and cell signaling molecules.
SUBCELDULAR LOCATION: Cytoplasmic and nuclear.
SIMILARITY: Belongs to the phosphatase 2A regulatory subunit B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA Res. 4:363-369(1997).
-!- FUNCTION: The B regulatory subunit might modulate substrate selectivity and catalytic activity, and also might direct the localization of the catalytic enzyme to a particular subcellular compartment. Has a role in cell shape control and septum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE-98162722; PubMed-9501991;

Mol. Microbiol. 49:1577-1593 (2003).
-!- CATALYTIC ACTIVITY: ATP + L-arginine + tRNA (Arg) = AMP + diphosphate + L-arginyl-tRNA (Arg).
-!- SUBGNIT: Monomer (By similarity).
-!- SUBGNIT: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Zhang Y.-Q., Ren S.-X., Li H.-L., Wang Y.-X., Fu G., Yang J.,

Gen. virol. 74:1215-1221(1993).

-! SUBCELGULAR LOCATION: Outer capsid.
-!- PIM: VP8 is one of two trypsin cleavage products of VP4; the other product is VP5.
-!- SIMILARITY: Belongs to the rotaviruses VP4 protein family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic Acids Res. 15:4361-4361(1987).

-- SUBCELLULAR LOCATION: Outer capeid.

-- PTM: VPB is one of two trypsin cleavage products of VP4; the other product is VP5.

-- SIMILARITY: Belongs to the rotaviruses VP4 protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lourer Layeru protein VP4 (Hemagglutinin) (Outer layer protein VP4) [Contains: Outer capsid proteins VP5 and VP8].

"Comparative analysis of the VP3 gene of divergent strains of the rotaviruses simian SA11 and bovine Nebraska calf diarrhea virus.";
J. Virol. 62:4022-4026(1988).
-!- SUBCELLUIAR LOCATION: Outer capsid.
-!- PTM: VP8 is one of two trypsin cleavage products of VP4; the other product is VP5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

"Comparative analysis of the VP3 gene of divergent strains of the rotaviruses similar SA11 and bovine Nebraska calf diarrhea virus.";
J. Virol. 62:4022-4026(1988).
-!- SUBCELLUIAR LOCATION: Outer capsid.
-!- PIM: VP8 is one of two trypsin cleavage products of VP4; the other product is VP5.
-!- SIMILARITY: Belongs to the rotaviruses VP4 protein family.

Bacteriol. 176:7601-7613(1994).

-i. FUNCTION: REGULATES THE TRANSCRIPTION OF GENES INVOLVED IN THE BIOSYNTHERSIS OF PATHERIAL ADHESIN-III.

-i. SIMILARITY: HIGH TO E.COLLI DARA, SOME, TO E.COLI PAPB.

-i. CAUTION: It is uncertain whether Met-1 or Met-17 is the initiator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Garcia M.-I., Labigne A., le Bouguenec C.L.; "Nucleotide sequence of the afimbrial-adhesin-encoding afa-3 gene cluster and its translocation via flanking IS1 insertion sequences.";

Sequencing the 500-kb GC-rich symbiotic replicon of Rhizobium sp.

NGR234 using dye terminators and a thermostable 'sequenase': a beginning.";

-!- FUNCTION: COULD BE REQUIRED FOR THE FORMATION OF A FUNCTIONAL NITROGENASE FE PROTEIN. PROBABLY ACCEPTS ELECTRONS FROM FIXA/FIXB AND REDUCES A QUINONE.

-!- COPACTOR: FAD (Potential).

-!- SIMILARITY: Belongs to the ETF-QO / fixC family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

"Complete genome sequence of Vibrio vulnificus CMCP6.";
Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Required to facilitate the formation of correct disulfide bonds in some periplasmic proteins and for the assembly of the periplasmic c-type cytochromes. Acts by transferring electrons from cytoplasmic thioredoxin to the periplasm. This transfer involves a cascade of disulfide bond formation and reduction steps (By similarity).
-!- CATALATIC ACTIVITY: Protein dithiol + NAD(P) + = protein disulfide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  THIOL: DISULFIDE INTERCHANGE PROTEIN DSBD.

Outer layer protein VP4 - human rotavirus A (serotype G3, strain AU-1)
NyAlternate names: hemagglutinin; outer capsid protein VP4
N;Contains: outer layer protein VP5; outer layer protein VP8
C;Species: human rotavirus A
C;Species: human rotavirus A
C;Accession: JQ1638
R;Isegawa, Y; Nakagomi, O; Nakagomi, T; Ueda, S.
J, Gen. Virol. 73, 1939-1946, 1992
A;Aritle: A VP4 sequence highly conserved in human rotavirus strain AU-1 and feline rotav
A;Reference number: JQ1638; MUID:92356070; PMID:1322955
A;Accession: JQ1638
